CarePortal.™ **A comprehensive and customizable cloud-based information portal designed for physicians and healthcare providers.**

Remotely monitor, connect, and care for patients via MTI's secure web-based telehealth CarePortal.

- Automatically receive patient's physiologic test and medication data
- Automated rules-based reports and alerts of actionable information for quick triage of patients
- Quickly view trending of historic data provides visibility to preceding and precipitous events
- Connect and communicate with patients, other heath professionals, and patient's caregivers via secure email, SMS, and fax
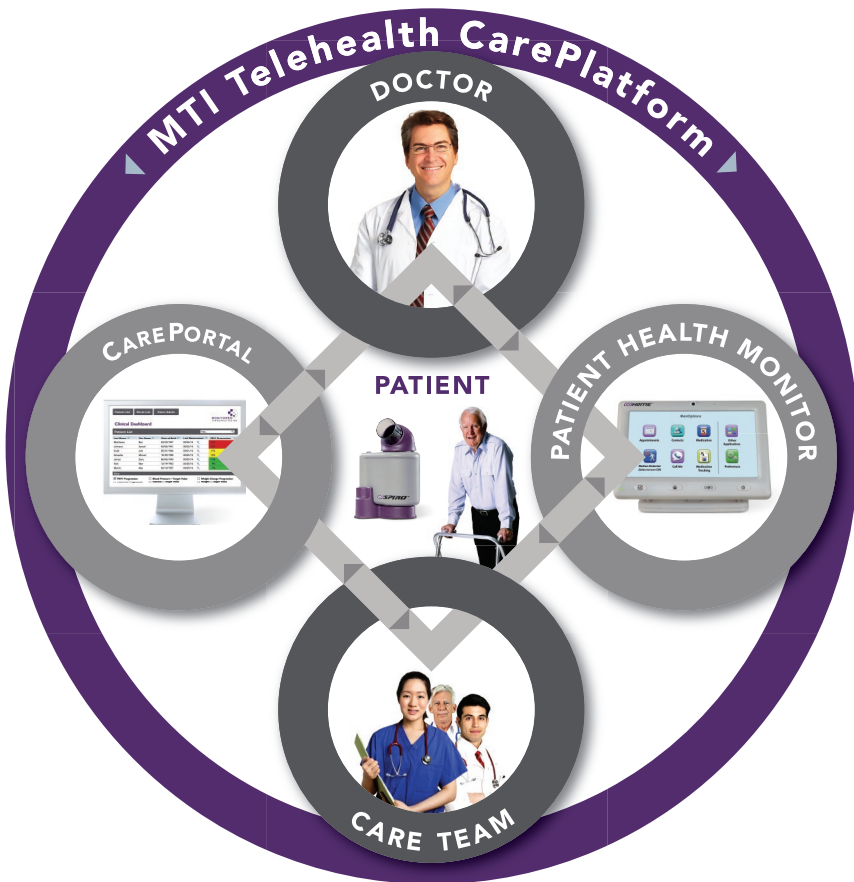

Developed for:

- Hospitals and Health Systems
- Physician Group Practices
- Home Health Providers
- Accountable Care Organizations (ACOs)
- Senior Care Service Companies
- Assisted Living Facilities

MONITORED THERAPEUTICS INC

MONITOR. CONNECT. CARE.

Optimize Patient Care and Outcomes

A HIPAA compliant cloud-based platform, the MTI Telehealth *CarePortal™* delivers a full suite of time-saving capabilities to remotely monitor, communicate, and care for your patients.

The MTI Telehealth CarePlatform also provides the patient, family members and caregivers with single point access to care information and records.

2Net is a registered trademark of Qualcomm Inc.

Simplified Patient Data Collection

The *CarePortal* clearly displays patients' physiologic testing results in real time. Using 2Net® technology (Qualcomm), Smartphones, or other physiological data collection hubs, like MTI's *GoHome™* Patient Health Monitor, the *CarePortal* enables the collection and display of most types of physiologic data, regardless of the manufacturer.

Receive subjective assessments through question sets and electronic patient diaries.

Clinical Dashboard for Quick Triage

The *CarePortal's* Clinical Dashboard allows for quick, single-screen monitoring of patient's status. Quickly triage patients based on your specified metrics and receive actionable data alerts to prioritize care. Short and long term trending of historic data provides visibility to preceding and precipitous events.

Automated Rules-Based Alarms and Alerts

Create alarms and alerts for individual patients or patient groups at individualized thresholds to provide actionable notifications. Alarms/Alerts can be sent via email or SMS, and can be assigned to multiple individuals (physician, case manager, nurse, etc.).
Automated patient reminders to improve treatment adherence, including medication and testing reminders.

Easily Connect and Communicate

Easy and secure bi-directional communication with patients and care team members via email or SMS.

Automatically create customizable patient question and answer sessions or a daily diary for patients; and receive alerts for patient status changes or events.

MONITOR. CONNECT. CARE.
